Administrator FTE

The administrative FTE is intended only to provide a basic count. More meaningful analysis will be accomplished when a district's enrollment is considered, as is the case with the pupil-to-administrator ratio calculation.

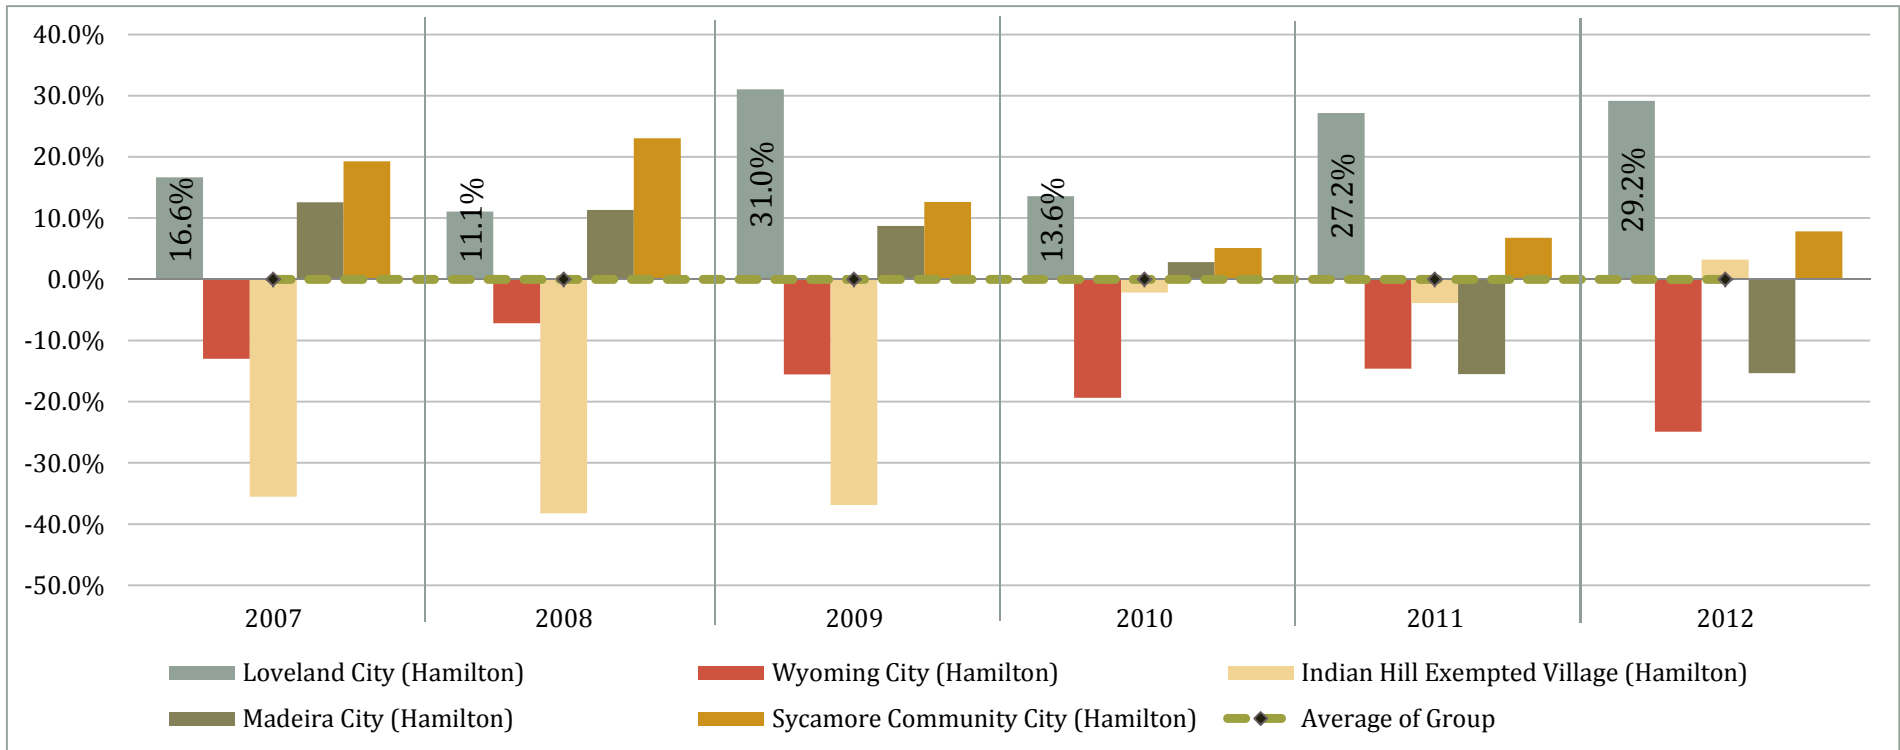

Students per Administrator

By comparing a district's administrator FTE with number of students served, the resulting students served per administrator ratio is helpful when comparing administrative staffing among districts.

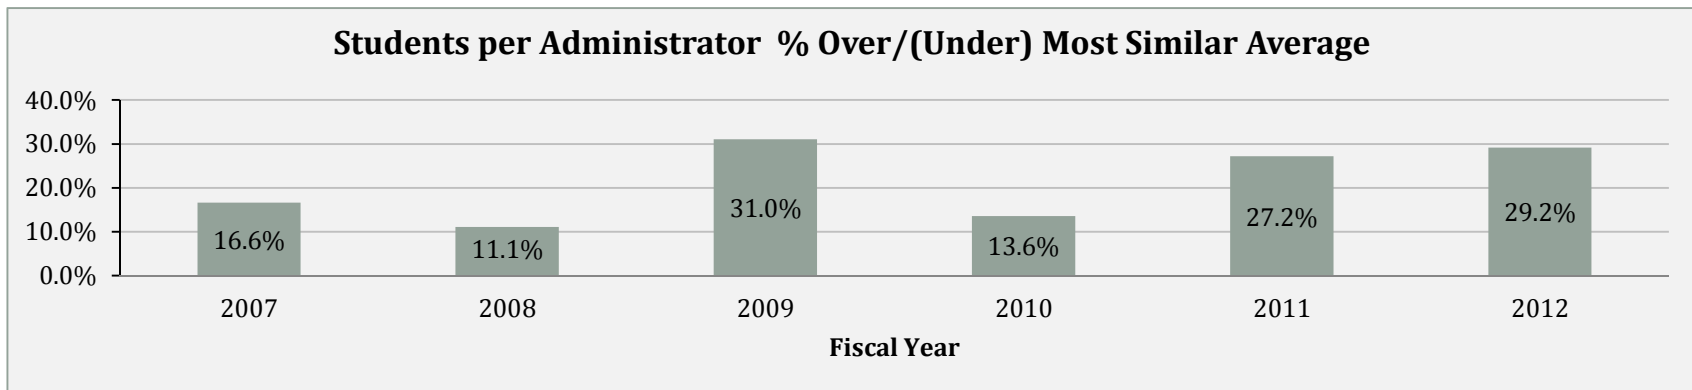

Students per Administrator % Over/(Under) Average Students Served

The students-to-administrator ratio provides the number of students each administrator serves. The resulting ratio when compared to the similar group average provides for the number of administrators over/(under) the similar grouping and equalized for differences in enrollment. A negative percentage below indicates more administrators than the average district and a positive percentage indicates fewer administrators than the average.

Students per Administrator % Over/(Under) Most Similar Average

Average Administrator Salary

Each districts' average administrator salary is listed below and is compared the similar group average.
